Wake Forest	919-453-5363
Holly Springs	919-586-0050

Immunizations

A vital part of your child's healthcare

A Family-Centered Medical Home -- coordinated, continuous care

Immunizations are one of the most important things you can do for your child, your family, your *future family* and friends.

Vaccinations for infants, children, teens and adults are life-saving and vital to your health. We don't vaccinate just to protect our children and ourselves; we vaccinate to protect *our grandchildren* (future generations), *our friends and family* (with whom we are exposed to daily), and *vulnerable people* (those with immune deficiencies, the elderly, and premature infants).

Vaccines save our lives and all of those we come in contact with. Please get your child fully vaccinated! At Jeffers, Mann & Artman, we are concerned about the misinformation our families are exposed to. Here is a list of some resources available to help you find reliable information regarding vaccines.

Check these sites to find out:

- Are vaccinations safe?
- When do you need them & why are there so many doses?
- What are the ingredients?
- Will it be covered by my insurance?

American Academy of Pediatrics

Up-to-date information about vaccines and disease epidemics in our communities.
www.aap.org/immunizations

Center for Disease Control

This Center has the latest news regarding diseases and vaccines both nationally and internationally. The website includes a list of the most frequently asked questions regarding vaccines in children. It's a very comprehensive website to answer many of your questions and concerns.
www.cdc.gov/vaccines

Vaccine Education Center

Dr. Paul Offit of The Children's Hospital of Philadelphia is one of the country's most knowledgeable authorities on childhood vaccines. This site provides comprehensive information about vaccines and the diseases that are infecting our children who are not protected by vaccinations.
www.vaccines.chop.edu

Immunization Action Coalition

This website is an excellent resource about immunizations. It has great handouts and articles, as well as images of diseases that vaccines prevent (may not be appropriate for young children to view).
